

## Non-Phthalate Plastisol Inks (Midori Series)

Sun White Plus I-19-9100

---

### Applications

- Direct printing
- Light, Medium & dark colored garments
- Cotton

### Features

- Creamy body
  - Fast flashing
  - Bright
  - Excellent printability
  - Soft hand
- 

### General Info:

Sun White is our economy cotton white, formulated for the printers who are looking for a nice printing cotton white without the high price. The combination of coverage and ease of printing makes this an ideal cotton white for any shop.

**Bleed Resistance:** None

**Opacity:** High

**Storage:** Ideally 65° to 80°F. Keep out of direct sunlight.

**Mesh:** 86-280

**Stencil:** Any direct emulsion or capillary film

**Wet on Wet Printing:** Can be printed wet-on-wet to increase production.

**Modifications:** To reduce viscosity use Curable Reducer (I10-9906), improve stretch use G&S Base (I10-1020), puff use Puff Additive (I10-9903), extend color use Soft-hand Base (I10-0111) & for suede puff or dulling use Suede Additive (I10-9907).

**Squeegee Hardness & Angle:** Medium to hard at a 45 degree angle.

**Flashing:** 700°F for 6 seconds, just enough so the surface is tack free.

**Squeegee Blade:** Sharp.

**Fusion/Curing:** 325°F/160°C for 1 to 1 ½ minutes. Oven temperature can be increased and dwell time decreased. For heat presses use 390°F/195°C for 8 seconds.

**Wash-up:** Any plastisol cleaner.

**Special Notes:** PVC inks are thermoplastic compounds that require heat to fuse or cure. If ink rubs off on a white cloth or cracks, temperature and/or dwell time should be increased. Do not dry clean and always test on fabric to be printed.
